

Asset Management and Pocket RAMM

This 1 day course will show users how to manage access to asset information in their database, use Pocket RAMM to record asset inspection and condition information on your network, and use User Defined Tables to manage more asset classes.

Topics Include

- User permissions
- User Defined Tables (UDTs)
- Importing and exporting data
- Using Pocket RAMM for Assessments
- Using Pocket RAMM for Inspections
- Road centreline management

Catherine Hoeberechts

Concepts Include

- Lookup consistency
- Security
- UDTs for asset management
- UDTs and Pocket RAMM
- UDT parent/child relationships

Fiona Derrick

Skills You Will Gain

- Manage user security access and permissions
- Set up and perform asset assessments and inspections
- Network management
- Use UDTs to manage asset classes such as stormwater, parks, reserves and other assets

Who Should Attend

You should attend this course if you are already familiar with RAMM or have attended the Essential RAMM training course and want to improve your RAMM knowledge and expertise.
